

Rental Trust Platform Constitution

We don't help people find rentals. We help people prove trust when renting.

This document defines the **non-negotiable principles** governing how the Rental Trust platform is designed, built, and operated. Every feature, workflow, and line of code must comply with this constitution.

1 Data Ownership (Non-Negotiable Rule)

Rule

Tenants always own their data.

Implications - All tenant documents are uploaded by tenants themselves - Landlords cannot upload, create, or modify tenant data - Tenant data is never reused or reshared without explicit tenant action

Allowed - Tenant uploads documents - Tenant initiates sharing

Forbidden - Landlord-uploaded tenant documents - Automatic resharing of tenant data

2 Sharing ≠ Copying (Critical Concept)

Rule

Sharing means permissioned access, not duplication.

Implications - Documents are viewed through controlled access - Access is time-bound and revocable - Permanent copies are never distributed by default

Allowed - Secure in-platform viewing - Watermarked or restricted downloads

Forbidden - Emailing PDFs - Permanent public links

3 Explicit, Granular, Logged Consent

Rule

Every access to tenant data requires explicit, granular consent.

Consent must record - Who requested access - What data was shared - When access began - When access ends - Who revoked access

Forbidden - Blanket permissions - Implicit or assumed consent

4 Revocation Must Be Immediate and Absolute

Rule

Revocation immediately removes access.

Implications - Access tokens must be invalidated in real time - Cached or previously granted access must fail immediately

Forbidden - UI-only revocation - Delayed or partial access removal

5 Facts Only — No Interpretation

Rule

The platform records verifiable events, not opinions or judgments.

Allowed - Lease start and end dates - Payment recorded as on-time or late - Verification events

Forbidden - Risk scores - Ratings or labels - Predictive or judgmental language

6 Mandatory Source Attribution

Rule

Every recorded fact must clearly state its source.

Examples - "Reported by Landlord A on Oct 12" - "Verified via Provider X on Nov 3"

Forbidden - Anonymous or aggregated facts without traceability

7 Full Tenant Visibility

Rule

Nothing about a tenant exists without their ability to see it.

Implications - Tenants can view all data associated with them - Tenants can review access logs and reported events

Forbidden - Hidden notes - Internal-only tenant flags

8 Disputes Are Recorded, Not Resolved

Rule

The platform does not arbitrate truth; it records disagreement.

Implications - Disputes preserve all reported facts - Status is clearly marked as “Disputed”

Forbidden - Deleting contested records - Platform-side judgments

9 Time-Bound by Default

Rule

Access and relevance must be time-bound by default.

Implications - Sharing permissions expire automatically - Historical data is timestamped - Tenants control how much history they share

Forbidden - Permanent negative records - Unlimited default access

Guiding Principle

Trust is built on **verifiable facts**, **explicit consent**, and **user control** — never on hidden logic or opaque scoring.

Every feature must answer one question before release:

Does this respect tenant ownership, consent, and factual neutrality?

If the answer is no, the feature does not ship.

Final Commitment

Rental Trust is a neutral trust infrastructure.

We commit to: - Never selling tenant data - Never deciding who gets housing - Never hiding information from users

This constitution is binding for all future development and partnerships.
